### Allowed Claims

1. Claims 1-13 are allowed.

### Reasons For Allowance

2. The following is an examiner's statement of reasons for allowance: the closest prior art of Kuroda (US 6,804,020) teaches the compressing/expanding section 207 compresses the image entered from the high-speed image bus 216 by any of several image compressing methods, such as MH (Modified Huffman), MR (Modified READ: a facsimile coding method), MMR, JPEG (a compressing method of a color still image). Section 207 has functions of sending the thus compressed data to the high-speed CPU bus 204 or to the high-speed image bus 216 again, or expanding, on the contrary, the compressed data entered from these to buses in accordance with the method used for compression and transmitting the thus expanded data to the high-speed image bus 216. See Fig.1 col. 5 lines 17-31. Kuroda failed to teach or suggest for a decoding unit which decodes the encoded compressed image information and the encoded compressed printing image information, and which outputs the compressed image information and the compressed printing image information; an expansion unit which expands the compressed image information and the compressed printing image information decoded by the decoding unit; and a forming unit which forms an image onto a recording medium on the basis of the image information and the printing image information expanded by the expansion unit. As cited in independent claims.
